

Among the issues concerning today's trade professionals are those of site waste, it's environmental impact and the costs involved which can be phenomenal.

Site waste management plans have become statutory practice for building projects of over £300k, recording the types and volumes of waste generated per project. Then there is landfill tax, (currently in the region of £65 per tonne) and the fact that landfill availability is becoming tighter, meaning that your site waste will have to travel further to be processed - more cost to you.

Not easy problems to solve: but small changes in practice can have a big impact in the long run and we must all do our bit:

Introducing the **RELOAD** system from Bond It.

Using the **RELOAD** system, the only waste product is the small aluminium slug which is discarded once the sealant is gunned out. That slug is as much as 60% lighter than an empty cartridge and takes up just an eighth of the volume.

Add to that the typical 50% saving you make when you buy a foil sausage of sealant compared with a traditional cartridge of the same material and those little changes begin to matter.

Otherwise, with **RELOAD** everything else is the same: same quality material inside, you can use your usual cartridge gun - no need to buy new, and you can keep on using the outer plastic sleeve again and again.

RELOAD

THE REUSABLE SEALANT SYSTEM

SAVE WASTE, SAVE TIME, SAVE MONEY

With **RELOAD** the sealant is encased in a foil sausage, simply insert this into the reusable plastic cartridge, attach the supplied nozzle and you're ready to do the job.

Once the sealant is used, remove the compressed foil slug, select your next sausage ... and **RELOAD**.

LOAD, SEAL, REPEAT

it's as simple as that

LOAD, SEAL & REPEAT

Three small steps to help make a difference.

1: Load a foil sausage into the sleeve

2: Attach the nozzle, load up and seal away

3: Discard the aluminium slug and repeat

Available in 3 kits: **basic**, **cartridge** and **refil**.
See the next panel for full kit details and visit
www.bonditgroup.com.

BENEFITS OF THE SYSTEM

Less Waste: only a small amount of aluminium packaging is left.

Lower Costs: as the slugs are smaller and lighter (up to 60% compared with traditional plastic cartridges) you spend far less on site removal. Plus on average each foil sausage costs you 50% less than the same product in a cartridge.

Environmentally Friendly: using our system shows a commitment to environmental issues and their requirements. It could also give you a competitive edge over other suppliers.

Wide Choice: some of our most popular silicones are available for this system, see list below.

It's Standardised: you don't need any special equipment to go with the system, **RELOAD** fits any standard skeleton gun.

Durability: the sleeve can be used again and again and the system will not jam in use unlike some traditional cartridges and guns.

WHAT'S AVAILABLE?

RELOAD is available as a **basic** kit, a **cartridge** bundle and a **refil** bundle. The basic kit (code RLK) consists of 11 foil sausages, 3 plastic nozzles and one reusable sleeve. The cartridge bundle (code RLCART) consists of 12 outer sleeves and the refil bundle (code RLS) consists of 12 aluminium foil sausages featuring your choice of the popular materials listed below:

WP100 - high quality oxime silicone (white)

Multi-Mate - flexible filler (white and trans)

Frame-Mate - door and window sealant
